

Haväng, beautiful Österlen in Skåne – Light where it couldn't be....

We continue to develop my brilliant innovation designed paving stones in glass. They can be made interactive and respond to sound or presence, touch using shock sensors, programmed or just lie still and be beautiful and enlightening. On Havängs beach in the Scandinavian summer light, they are connected to a car battery, to show that no electrical installation is required to illuminate exactly anywhere- where it shouldn't be possible. In the middle of the woods, on a desolate road or even on a small island in the archipelago? Now we are continuing to try to make glass stones shining with solar energy.
